

Jude McMurry (jmcmurry11606@gmail.com)

Jude McMurry (2014).

M.Sc. thesis (1982): Petrology and Rb–Sr geochemistry of the Monte das Gameleiras and Dona Ines plutons, northeastern Brazil. Supervisor: Prof. Leon E. Long; Prof. A.N Sial was a member of the advisory committee.

Ph.D. Dissertation (1991): Petrology and geochemistry of a megacrystic quartz monzonite pluton). Supervisor: Prof. Calvin Barnes; Prof. A.N. Sial was a member of her advisory committee.

Dr. Jude McMurry holds a B.Sc. (1981) and a M.A. (1982) degrees from the University of Texas at Austin and a Ph.D. degree (1991) from the Texas Tech University at Lubbock, Texas. She visited the LABISE twice (1980 and 1987). In the first time she did field work in an area of Rio Grande do Norte aiming at her Master's thesis and in 1987, in western Pernambuco, for her Ph.D. Dissertation. In both occasions, Profs. Leon E. Long and A.N. Sial accompanied her during the field work.

She is a geochemist with expertise in geochronology, geochemical modeling, and low-temperature aqueous chemistry and mineralogy. She retired as a principal scientist in 2014 from the Southwest Research Institute in San Antonio, Texas, USA, where she was responsible for studies of radionuclide transport in support of the high-level radioactive waste repository safety program of the U.S. Nuclear Regulatory Commission. In previous employment with Atomic Energy of Canada Limited (AECL), she served as the project coordinator for multidisciplinary case studies to assess and develop options for the long-term management of used fuel from nuclear reactors in Canada.
